SCARLET HUFFMAN

Directory of Grants in the Humanities 1999-2000

Springer Science & Business Media

Leopold Nowak war viele Jahrzehnte in der musikwissenschaftlichen Forschung und Lehre in Österreich tätig und als langjähriger Leiter der Musiksammlung der österreichischen Nationalbibliothek für deren Auf- und Ausbau nach dem Zweiten Weltkrieg verantwortlich. Als Bruckner-Forscher genoss er internationales Ansehen und war darüber hinaus ein wesentlicher Akteur im Wiener Kulturleben des 20. Jahrhunderts. Der vorliegende Band stellt seine vielfältigen Tätigkeiten erstmals dar und enthält neben Erinnerungen der Autorin, seiner Tochter, umfangreiches, bisher unveröffentlichtes Material aus Privatbesitz sowie wertvolle Dokumentationen für weiterführende Fragestellungen.
[The Representation and Social Transformation of American Women's Colleges, 1895-1910](#)
Hollitzer

Wissenschaftsverlag
This volume invites young scientists and doctoral students in the fields of capital market theory, informational economics, and management science to visualize the many different ways to arrive at a thorough understanding of risk and capital. Rather than focusing on one subject only, the sample of papers collected may be viewed as a representative choice of various aspects. Some contributions have more the character of surveys on the state of the art while others stress original research. We found it proper to group the papers under two main themes. Part I covers information, risk aversion, and capital market theory. Part II is devoted to management, policy, and empirical evidence. Two contributions, we think, deserved to break this allocation and to be placed in a prologue. The ideas expressed by Jost B. Walther, although meant as opening address, draw interesting parallels for risk and capital in genetics and evolution. An old, fundamental problem was asked and solved by Martin J. Beckmann: how does risk affect saving? The wise answer (Martin's

60th birthday is in July 1984) is both smart and simple, although the proof requires sophisticated dynamic programming. As always, such a work must be the result of a special occasion.

Leopold Nowak Strange Journey
John R. Friedeberg Seeley and the Quest for Mental Health

Modern workplaces are following a strong trend of increasing flexible working practices and approaches, offering more flexibility in working times, working places, work organization, and work relations as the result of new information and communication technologies. This book brings together a group of internationally recognized experts in the field of flexible work to examine the psychological and social implications of these practices, describing the current state of research and empirically-based practices in this field. It focuses on organizational, job, and individual factors related to the quality of working life, and identifies potential risk groups where the benefits of flexible work are suppressed or not realized. Ideal for organizations implementing or

considering implementing flexible work, for professionals and researchers in work and organizational psychology, and for HR professionals, this volume is an invaluable overview of rapidly changing work norms and their impact on working life.

Migritude John Wiley & Sons

This biographical history follows the iconoclastic career of John R. Friedeberg Seeley, pre-eminent "Pop Sociologist" and Mental Health Activist of the 1950s. Seeley's "strange journey" began as a British Home Child, estranged from his cosmopolitan German-Jewish family. Seeley progressed through the ranks of the Canadian Army Medical Corps, and the University of Chicago, to achieve prominence as the author of *Crestwood Heights*, a defining work of postwar social science. He led an ambitious mental health project in Canadian schools, and was a founding father of York University. However, Seeley's struggle with mental illness and Jewish identity brought him into conflict with the Canadian establishment. His career ended in academic exile, but his dream of a mental health revolution still

resonates.

Springer Science & Business Media
Strange Journey John R. Friedeberg Seeley and the Quest for Mental Health Academic Studies Press

The Figure of the Migrant Springer Science & Business Media
The U.S. debut of internationally acclaimed poet and performance artist Shailja Patel, *Migritude* is a tour-de-force hybrid text that confounds categories and conventions. Part poetic memoir, part political history, *Migritude* weaves together family history, reportage and monologues to create an achingly beautiful portrait of women's lives and migrant journeys undertaken under the boot print of Empire. Patel, who was born in Kenya and educated in England and the U.S., honed her poetic skills in performances of this work that have received standing ovations throughout Europe, Africa and North America. She has been described by the *Gulf Times* as "the poetic equivalent of Arundhati Roy" and by CNN as "the face of globalization as a people-centered phenomenon of migration and exchange." *Migritude*

includes interviews with the author, as well as performance notes and essays.

The Economist Humana
Time-frequency analysis is a modern branch of harmonic analysis. It comprises all those parts of mathematics and its applications that use the structure of translations and modulations (or time-frequency shifts) for the analysis of functions and operators. Time-frequency analysis is a form of local Fourier analysis that treats time and frequency simultaneously and symmetrically. My goal is a systematic exposition of the foundations of time-frequency analysis, whence the title of the book. The topics range from the elementary theory of the short-time Fourier transform and classical results about the Wigner distribution via the recent theory of Gabor frames to quantitative methods in time-frequency analysis and the theory of pseudodifferential operators. This book is motivated by applications in signal analysis and quantum mechanics, but it is not about these applications. The main orientation is toward the detailed mathematical investigation of the rich

and elegant structures underlying time-frequency analysis. Time-frequency analysis originates in the early development of quantum mechanics by H. Weyl, E. Wigner, and J. von Neumann around 1930, and in the theoretical foundation of information theory and signal analysis by D.

Springer Science & Business Media
Endocytosis is a fundamental cellular process by means of which cells internalize extracellular and plasma membrane cargos for recycling or degradation. It is important for the establishment and maintenance of cell polarity, subcellular signaling and uptake of nutrients into specialized cells, but also for plant cell interactions with pathogenic and symbiotic microbes. Endocytosis starts by vesicle formation at the plasma membrane and progresses through early and late endosomal compartments. In these endosomes cargo is sorted and it is either recycled back to the plasma membrane, or degraded in the lytic vacuole. This book presents an overview of our current knowledge of

endocytosis in plants with a main focus on the key molecules undergoing and regulating endocytosis. It also provides up to date methodological approaches as well as principles of protein, structural lipid, sugar and microbe internalization in plant cells. The individual chapters describe clathrin-mediated and fluid-phase endocytosis, as well as flotillin-mediated endocytosis and internalization of microbes. The book was written for a broad spectrum of readers including students, teachers and researchers. *Root Physiology: from Gene to Function* Taylor & Francis

This collection of essays, which derive from a symposium held at the Art Institute of Chicago in 2005, tells the story of how medieval art was collected by both individuals and institutions in the American Midwest. This book will appeal to both medievalists and scholars of nineteenth- and twentieth century American history. In addition, it will also appeal to scholars who are interested in museum studies and the history of collecting. The essays in the first section,

“Collecting and Displaying Medieval Art,” consider the formation of medieval art collections at influential cultural institutions in three of the most important centers of industry and culture in the Midwest: Chicago, Detroit and Cleveland. The second section, “Medieval Art as Inspiration and Education,” examines the motives of both private donors and museum professionals in forming collections and establishing period rooms and cloistered spaces at museums in Toledo, Kansas City, and St. Louis, among others. At the opposite end of the spectrum was a new trend in curatorial practice, beginning in the 1930s, that favored the dismantling of period rooms and espoused displaying historical works of art in more distinctly modern settings, a theme that pervades section three, “Medieval Art and Modernism.” An essay on medieval art in Midwestern university art museums and another one that considers the impact of works from medieval collections in special exhibitions serve as a remarkable coda to the rest of the volume. Two appendices follow this, one that provides an

overview of medieval art collections in Midwestern university museums and another which provides a biographical sketch of prominent dealers of medieval art from 1900-1950.

Proceedings of the Viktor Frankl Institute Vienna, Volume 1

Stanford University Press
Proof of the "Fundamental Theorem of Asset Pricing" in its general form by Delbaen and Schachermayer was a milestone in the history of modern mathematical finance and now forms the cornerstone of this book. Puts into book format a series of major results due mostly to the authors of this book. Embeds highest-level research results into a treatment amenable to graduate students, with introductory, explanatory background. Awaited in the quantitative finance community.

Geometry and Quantum Field Theory

Academic Studies PRes
The first title in a new series, this book explores topics from classical and quantum mechanics and field theory. The material is presented at a level between that of a textbook and research papers making it ideal for graduate students. The

book provides an entree into a field that promises to remain exciting and important for years to come.

historical perspectives and contemporary dynamics

Routledge
This second edition details techniques for the study of cargo trafficking through endosomes. New and updated chapters guide readers through methods and protocols on the structural aspects of plant endosomes, combined biochemical, omics, imaging approaches to study the dynamics and contents of endosomal compartments. Additional chapters are dedicated to the analysis of lipids on endosomes and the identification and analysis of lipid binding proteins and lipid-binding domains relevant for the study of plant endosomes. Written in the highly successful *Methods in Molecular Biology* series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and cutting-edge, *Plant Endosomes: Methods and*

Protocols, Second Edition aims to ensure successful results in the further study of this vital field.

Environmentalism in Central and Southeastern Europe Humana

This book presents results of an archaeological research project focused on a specific monumental area, the citadel, in the city of Urfa (Turkey), known in ancient times as Edessa. Three seasons of fieldwork were carried out (2014-2016) in order to identify the building sequence of the citadel and establish an absolute chronology of events.

A History of Medieval Art in Midwestern Museums Routledge

These Proceedings include the written version of papers presented at the IAG International Symposium on "Gravity, Geoid and Earth Observation 2008". The Symposium was held in Chania, Crete, Greece, 23-27 June 2008 and organized by the Laboratory of Geodesy and Geomatics Engineering, Technical University of Crete, Greece. The meeting was arranged by the International Association of Geodesy and in particular by the IAG Commission 2: Gravity Field. The symposium

aimed at bringing together geodesists and geophysicists working in the general areas of gravity, geoid, geodynamics and Earth observation. Besides covering the traditional research areas, special attention was paid to the use of geodetic methods for: Earth observation, environmental monitoring, Global Geodetic Observing System (GGOS), Earth Gravity Models (e.g., EGM08), geodynamics studies, dedicated gravity satellite missions (i.e., GOCE), airborne gravity surveys, Geodesy and geodynamics in polar regions, and the integration of geodetic and geophysical information.

Plants & People CRC Press Since 1963 the series *Patristische Texte und Studien* has been publishing research findings coordinated by the Patristics Commission, which today is a joint venture of all the German Academies. The series is presenting editions, commentaries and monographs on the writings and teachings of the Church Fathers.

Foundations of Time-Frequency Analysis
Cambridge Scholars Publishing

This Sourcebook contains a comprehensive collection of sources on the topic of the social history of the Roman world during the late Republic and the first two centuries AD. Designed to form the basis for courses in Roman social history, this excellent resource covers original translations from sources such as inscriptions, papyri, and legal texts. Topics include: social inequality and class games, gladiators and attitudes to violence the role of slaves in Roman society economy and taxation the Roman legal system the Roman family and gender roles. Including extensive explanatory notes, maps and bibliographies, this Sourcebook is the ideal resource for all students and teachers embarking on a course in Roman social history.

Endocytosis in Plants
Routledge

In the last decade, enormous progress has been made on the physiology of plant roots, including on a wide range of molecular aspects. Much of that progress has been captured in the chapters of this book. Breakthroughs have been made possible through integration of molecular

and whole-plant aspects. The classical boundaries between physiology, biochemistry and molecular biology have vanished. There has been a strong focus on a limited number of model species, including *Arabidopsis thaliana*. That focus has allowed greater insight into the significance of specific genes for plant development and functioning. However, many species are very different from *A. thaliana*, in that they are mycorrhizal, develop a symbiosis with N₂-fixing microsymbionts, or have other specialised root structures. Also, some have a much greater capacity to resist extreme environments, such as soil acidity, salinity, flooding or heavy-metal toxicities, due to specific adaptations. Research on species other than *A. thaliana* is therefore pivotal, to develop new knowledge in plant sciences in a comprehensive manner. This fundamental new knowledge can be the basis for important applications in, e.g., agriculture and plant conservation. Although significant progress has been made, much remains to be learnt. It is

envisaged that discoveries made in the recent past will likely lead to major breakthroughs in the next decade.

An Introduction Springer
This extensive undertaking, Accelerator Mass Spectrometry, conducts an elaborate and comprehensive summary of one of the foremost catalysts of progress in scientific research. Accelerator mass spectrometry (AMS), an innovative analytical technique, measures rare atoms at unprecedented levels of sensitivity, revolutionizing the science of radiocarbon dating and accessing new natural radioisotopes as environmental tracers and chronometers. This book demonstrates how AMS is applied in the studies of extraterrestrial materials, the earth sciences, the future of the global environment, and the history of mankind. This compendium also highlights the significant impact of AMS on several fields of scientific investigation, spurring remarkable studies in global climate change, ancient artifacts, pollution, nuclear safeguards, geochronology, and materials characterization. The

myriad of sample types and variety of applications in this examination include: Meteorites from Mars Ancient air trapped in Antarctic ice The Shroud of Turin The dating of human bones The colonization of the Americas and Australia Ancient rock art The crown of Charlemagne Cancerogenic effects of cooked meat The consequences of the Chernobyl accident The role of aluminum in Alzheimer's Disease This unique edition has compiled the diverse set of scientific literature into a single volume, suitable as a text or resource on the major AMS-related outcomes, issues, and methods.

Financial Aid for Research and Creative Activities Abroad, 2002-2004
Springer Science & Business Media

This book offers a much-needed new political theory of an old phenomenon. The last decade alone has marked the highest number of migrations in recorded history. Constrained by environmental, economic, and political instability, scores of people are on the move. But other sorts of changes—from global tourism to undocumented labor—have led to the fact

that to some extent, we are all becoming migrants. The migrant has become the political figure of our time. Rather than viewing migration as the exception to the rule of political fixity and citizenship, Thomas Nail reinterprets the history of political power from the perspective of the movement that defines the migrant in the first place. Applying his "kinopolitics" to several major historical conditions (territorial, political, juridical, and economic) and figures of migration (the nomad, the barbarian, the vagabond, and the proletariat), he provides fresh tools for the analysis of contemporary migration. From Edessa to Urfa: The Fortification of the Citadel Archaeopress Publishing Ltd

The establishment of the Intergovernmental Platform on Biodiversity and Ecosystem Services (IPBES) points to the crucial role attributed to science and knowledge for the successful implementation of biodiversity politics by both scientists and policy-makers. With the increased importance of biodiversity in international politics, and in part inspired by the

success the Intergovernmental Panel on Climate Change (IPCC) has had in raising awareness of global warming, the call for an 'IPCC for Biodiversity' was successful. The Politics of Knowledge and Global Biodiversity gives a full overview of the process of its implementation as finalised in 2013 and proposes an innovative

conceptual framework that puts this specific case into a more general perspective of international politics and relations. It provides a detailed empirical analysis of the knowledge politics associated with the establishment of IPBES and its conceptual framework and methodological approach is grounded in a theoretical perspective.

This pioneering work is the first to examine IPBES in this way and is essential reading for researchers and scholars of International Relations, Environmental and Biodiversity Politics, Science-Policy Interfaces and Global Environmental Governance. It will also be of interest to political scientists and social scientists.
